

## California and United States Falling Behind

We need high speed Internet for our homes, schools, hospitals, and workplaces. But most U.S. Internet connections are far too slow to send and receive large files for medical monitoring, to run a home-based business, or for multi-media distance learning. America is falling behind our industrialized peers at a time when we should be growing our competitiveness with the rest of the world.

The United States is 15th behind other industrialized countries in high speed Internet adoption, and 28th in Internet speeds.

### California Speed Test Results

Over the last year, people who live in California have gone to speedmatters.org to see the speed of their Internet connection. The results show that people who live in California, like those of the entire country, lag behind. The results also show that there is a digital divide in high-speed Internet connections.

### California Internet Speed Test

World Ranking		Average Download Speed (megabits per second)
1	South Korea	20.4
